

# Intramural Permission

Schools must have a process in place to obtain the following from the parent/guardian prior to student participation in intramural activities:

- Permission to participate
- Acknowledgment of the elements of the risk
- Student's medical information

Ophea has developed two options that schools may use/adapt to acquire this information from parents/guardians. The first option includes obtaining the permission to participate and the acknowledgment of the elements of risk (*while this option does not include students medical information, schools must have a process in place for gathering and communicating medical information of participants before participation*) while the second option includes obtaining the permission to participate, the acknowledgement of the elements of risk, and the appropriate medical information of the student from parents/guardians:

- **Sample Intramural Permission and Acknowledgment of Elements of Risk Form** Schools could include this sample form within the forms used for parental/guardian permission for internet use and permission to photograph their child/ward or within a digital system used by the school board (for example, Power School, My Blue Print etc.).
- **Sample Intramural Medical Information and Consent to Participate Form** Schools can send this form to parents/guardians to fill out and complete per intramural activity during the school year.
